

Don't you want to get your colleagues and the public excited about science –about your science–; about COST NECTAR science?

If your answer is yes, this training is for you!

Dedicated to:

...students (MSc, PhD), post docs or professionals interested in communication of science both to a specialised audience and to a general public.

NECTAR-SciComm is a 1 day training school to show you how to make your research widely available to a broader audience. We will combine theory with practical exercises to help you communicate your research in such a way that non-specialist can learn and appreciate its potential and significance!

NECTAR-SciComm will take place in the unparalleled framework offered by Cagliari (Sardegna, Italy), in the botanical garden of the Università degli Studi di Cagliari.
